Report Overview

The main components of the photoresist of the diazonaphthoquinone-phenolic resin system are diazonaphthoquinone and phenolic resin, and the component containing the diazonaphthoquinone is called a photosensitive compound (Photo-Active Compound, PAC). In fact, it is only one of the components of the photosensitive compound PAC. The composition of PAC also includes phenolic skeleton compounds, which have multiple hydroxyl groups that can be connected to diazonaphthoquinone. By selecting framework compounds with different framework structures, different numbers of substitution sites, and different substitution site spacings, the reactivity of PAC can be tuned, which in turn affects the overall performance of the diazonaphthoquinone-phenolic resin photoresist.
