## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Photoactive Compound (PAC) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Photoactive Compound (PAC) is one of the key ingredients in photoresist, and usually constitutes the basic formula of photoresist together with film-forming resin (Resin) and solvent. In 2024, the global production of PAC will be around 2,400 tons, with an average price of around 90 USD/Kg. As one of the most critical core raw materials in photoresist, PAC is typically characterized by high concentration and high barriers to entry. The global market is currently largely dominated by a handful of Japanese companies, with a long-term stable structure and a clear oligopoly in the supply chain. At the application level, PAC is primarily used in positive-tone photoresists for the panel industry and in photoresist formulations for g-line and i-line process nodes in semiconductor manufacturing. Due to its significant impact on photoresist performance and its significant contribution to the cost structure, it is widely considered one of the most value-intensive links in the photoresist industry chain. In China, domestic companies are still in the early stages of mass production and verification of PAC. Manufacturers with large-scale supply capabilities are limited, and the market still relies heavily on imports from Japan and South Korea. With the growing demand for independent and controllable production within the semiconductor and display industry chains, domestic substitution in the PAC segment is not only a key breakthrough in materials but also has the potential to boost the overall competitiveness of the photoresist industry in the future.

The global Photoactive Compound (PAC) market size was estimated at USD 216.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

4.50% during the forecast period.
