The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Photocatalyst Coating competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Photocatalyst Coating production reached approximately 2,240,000 tons, with an average global market price of around US\$ 500 per ton. Photocatalyst coating can effectively solve the problem of air pollution caused by indoor decoration, and has a long-term effect of mold and algae prevention. At the same time, nano photocatalyst antibacterial environmental protection coating has excellent self-cleaning and antifouling function, which can keep long-term clean and beautiful; It has excellent high weather resistance and good light and color retention effect; Excellent water resistance, acid resistance, alkali resistance, long-term protection, not easy to peel off; Good adhesion and strong washability; The film has high hardness and toughness, excellent hydrophobicity, easy to clean dirt. The global Photocatalyst Coating market is experiencing steady growth, driven by increasing demand for sustainable solutions in air purification, self-cleaning surfaces, wastewater treatment, and antimicrobial applications. With rising environmental awareness and stricter regulations on pollution control, photocatalyst coatings?primarily based on titanium dioxide (TiO₂)?are being widely adopted in construction, automotive, and industrial sectors to enhance surface durability while reducing maintenance costs. The market is also benefiting from advancements in nanotechnology, which improve coating efficiency and broaden applications, positioning photocatalyst coatings as a key material in the global shift toward green and smart infrastructure.
