Abstracts

An optocoupler, also known as an optoisolator, is an electronic component that transfers electrical signals between two isolated circuits by using light to couple the signals. It consists of a light-emitting diode (LED) and a photosensitive element, such as a photodiode, phototransistor, or photovoltaic cell, enclosed in a single package. The optocoupler provides electrical isolation, which prevents high voltages from one circuit from damaging or interfering with another circuit, while still allowing the transfer of data or control signals. The optocoupler market is highly competitive, with major players including Onsemi, Toshiba, Broadcom, Lite-On Technology, Everlight Electronics, etc. Among them, the top five global companies account for 57.28% of the revenue market share. In terms of product type, IGBT/MOSFET is the largest market segment, accounting for 29% of the market share. In terms of application areas, industrial applications account for about 25%. The growth of the optocoupler market is mainly driven by the following factors: Growing demand for smart meter systems: As the demand for smart meter systems increases, the optocoupler market also grows. Applications in different industries: The application of optocouplers in the automotive, consumer electronics, communications, and industrial fields continues to expand, which is also an important factor driving market growth. In summary, the optocoupler market is expected to continue to grow, mainly driven by the growth in demand for smart meter systems, product technology advancements, and expanded applications in multiple industries.

The global Photocouplers market size was estimated at USD 2724.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
