Report Overview

The photoelectric relay is a type of relay that operates based on light detection and can be used to control electrical circuits. This device utilizes a photosensitive component, such as a photodiode or a phototransistor, to sense changes in light intensity. When the light intensity crosses a predetermined threshold, the photoelectric relay triggers a switching action, either opening or closing a circuit. This technology finds applications in various fields, including automation, security systems, and telecommunications.

Photoelectric relays offer advantages such as high sensitivity, fast response times, and electrical isolation between input and output circuits, making them reliable for controlling electrical devices based on light signals.
