Report Overview

Photon counting linear array detector (PCLAD) is a detector used in X-ray imaging applications. It consists of a linear pixel array, each pixel capable of detecting a single X-ray photon. Unlike traditional X-ray detectors that measure the total energy deposited by X-rays in a given area, PCLAD can detect and count individual photons. This allows for higher resolution and sensitivity in X-ray imaging applications. When X-ray photons collide with pixels in PCLAD, they generate a charge that is detected and counted by the pixels. By analyzing the photon counting patterns in the array, the image of the X-ray source can be reconstructed with high accuracy. PCLAD has a wide range of applications in the field of X-ray imaging, including medical imaging, materials science, and non-destructive testing. They are particularly useful in high-resolution imaging applications that require low-dose X-ray sources, such as mammography and dental imaging.

The global Photon Counting Linear Array Detector market size was estimated at USD 285.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
