Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Photoresist Adhesion Promoter competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Photoresist Adhesion Promoters are critical auxiliary materials in semiconductor lithography, designed to improve the bonding strength between photoresists and substrate surfaces such as silicon, silicon dioxide, silicon nitride, and metals. By means of chemical bonding or surface energy modification, these promoters form a stable interfacial layer that prevents issues such as photoresist delamination, lifting, bubbling, or pattern defects during lithography. Common product types include silane-based materials (e.g., hexamethyldisilazane, HMDS), organotitanium compounds, organoaluminum promoters, and polymer-based adhesion promoters tailored to different lithography resists and process nodes. They are widely applied in IC manufacturing, advanced packaging, power semiconductors, optoelectronics, and MEMS, and their importance continues to increase as semiconductor processes demand higher precision and reliability. At present, the global Photoresist Adhesion Promoter market is expanding rapidly, driven by the transition to sub-7nm nodes, the adoption of EUV lithography, and capacity growth in advanced logic and memory devices. Major drivers include the need for higher yield and process stability in wafer fabs, the deployment of next-generation photoresists (such as EUV resists), and growing demand from end markets including 5G, AI, and automotive electronics. Meanwhile, stricter environmental and chemical safety regulations are pushing suppliers to innovate low-VOC, low-toxicity, high-purity, and eco-friendly adhesion promoters. Looking forward, the industry is expected to sustain steady growth, characterized by trends toward customization, higher purity, and regionalized supply to support advanced semiconductor manufacturing.

The global Photoresist Adhesion Promoter market size was estimated at USD 135.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
