## Abstracts

Photovoltaic DC isolation switches are key electrical equipment used to safely isolate DC circuits in photovoltaic power generation systems. Their main function is to cut off the DC power supply during system maintenance, fault repair or emergency situations to ensure personnel safety and equipment protection. Since photovoltaic arrays usually output high-voltage DC power with large currents, DC isolation switches must have high withstand voltage, strong arc extinguishing capability, high temperature resistance and corrosion resistance, and meet the requirements of long-term stable operation in harsh outdoor environments. Their design must comply with international standards and be adapted to the special needs of photovoltaic systems.

The global Photovoltaic DC Isolation Switch market size was estimated at USD 2263.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.70% during the forecast period.
