Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Photovoltaic Front Silver Paste competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.Photovoltaic silver paste is the core auxiliary material for preparing metal electrodes of photovoltaic cells, which directly affects the photoelectric performance of the cells. Photovoltaic silver paste is a mixture of high-purity silver powder as the conductive functional phase, glass oxide as the bonding phase, and an organic carrier. It is a uniform paste formed after stirring and three-roll rolling. Photovoltaic silver paste is attached to photovoltaic cells through screen printing technology, and after drying and sintering, it forms the metal electrode of the photovoltaic cell, which can collect and conduct the surface current of the photovoltaic cell. As the key electrode material of crystalline silicon solar cells, the product performance and corresponding electrode preparation process of photovoltaic silver paste are directly related to the photoelectric performance of solar cells, and it is the core auxiliary material of photovoltaic cells. According to the position of silver paste in the cell, it is divided into front silver paste and back silver paste. The front silver paste mainly collects and conducts photogenerated carriers, while the back silver paste mainly has a bonding effect (lower conductivity requirements), so the front silver paste is the main one. According to the temperature at which the silver paste is sintered to form conductivity on the substrate, it is divided into high-temperature silver paste (sintering temperature above 500°C) and low-temperature silver paste (sintering temperature below 250°C). Among them, high-temperature silver paste is currently the mainstream used in PERC and Topcon, while low-temperature is mainly used in HJT.

The global Photovoltaic Front Silver Paste market size was estimated at USD 2169.0
