Report Overview

The cover glass of photovoltaic modules is a barrier that protects the modules from wind, frost, rain, snow, and day and night heat and cold. However, the glass cover will reflect part of the sunlight and is easily adhered to by dust and dirt, reducing sunlight transmittance and affecting power generation efficiency. Therefore, coating photovoltaic glass anti-reflection coating on cover glass has become a crucial link in the photovoltaic power generation industry chain. This requires photovoltaic glass coating fluid.
