The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Photovoltaic Packaging POE Film competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.

Photovoltaic Packaging POE (Polyolefin Elastomer) Film is a specialized encapsulant material used in solar module manufacturing to protect photovoltaic (PV) cells from environmental degradation while ensuring long-term durability and performance. POE films are placed between the solar cells and the module's front glass or backsheet, providing electrical insulation, moisture resistance, and mechanical cushioning.

Market Drivers
Growth of Renewable Energy: The global push towards clean energy, especially solar power, has led to a continuous increase in the installation of PV modules. This directly boosts the demand for POE films, which are crucial encapsulation materials.
Superior Performance of POE Films: Compared with traditional EVA films, POE films have advantages such as better weather resistance, anti - PID performance, and thermal stability. They can improve the efficiency and service life of solar modules, making them the preferred material for high - efficiency and long - lifespan PV modules.
Technological Advancements: Continuous R & D efforts have led to the improvement of POE film properties and the reduction of production costs through new production processes, further promoting market growth.

Market Challenges
High Production Costs: The production of POE films depends on specialized raw materials and complex manufacturing processes, resulting in higher costs compared to EVA films. This price difference may limit their wider application, especially in cost - sensitive markets.
Intense Competition: With the growth of the market, competition among POE film manufacturers and alternative encapsulation materials (such as EPE and TPU) is intensifying. Manufacturers need to continuously innovate and optimize costs to maintain their market share.
Supply Chain Issues: The global

supply of POE resins, the main raw material for POE films, is concentrated among a few major petrochemical companies. Any disruptions in resin production, such as raw material shortages or geopolitical issues, can lead to supply chain bottlenecks and price volatility.

The global Photovoltaic Packaging POE Film market size was estimated at USD 2462.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
