Abstracts

PV pumps can replace the current pump systems and result in both socio-economic benefits as well as climate related benefits. The market for these devices will grow due to growing interest in reducing carbon emissions and widespread adoption of renewable energy equipment. Low operating costs and depletion of fossil fuel supplies are two major reasons driving the expansion of the solar pump industry. Increased government subsidies to farmers and manufacturers and adoption of stringent rules to reduce carbon footprint will increase product penetration over the expected period. Solar pumps will be in high demand due to energy scarcity, high dependence on rainfall and logistical difficulties in delivering fuel to remote areas.

The global Photovoltaic (PV) Pumping Systems for Irrigation market size was estimated at USD 2894.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
