Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Photovoltaic Silane Coupling Agent competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Photovoltaic grade silane coupling agent is a high-purity organic silane coupling agent specially developed for photovoltaic module encapsulation. Its silane group can form a chemical bond with the surface of glass or silicon substrate, and the functional group can cross-link with encapsulation materials such as EVA or POE, thereby significantly improving the bonding strength and wet heat durability at the interface of the module. Due to the extremely high requirements for purity and anti-aging performance, the average market quotation of this type of product in 2024 is US\$5-18/kg, among which photovoltaic grade specifications are commonly around US\$15/kg. In recent years, with the rapid growth of global photovoltaic installed capacity and the continuous increase in the requirements for module reliability, the silane coupling agent market has increased by about 6% year-on-year since 2023, and is expected to maintain an annual compound growth rate of about 5% from 2024 to 2030; the global silane coupling agent market size in 2024 is about US\$1.57 billion.

The global Photovoltaic Silane Coupling Agent market size was estimated at USD 1371.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
