Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Photovoltaic System SPD competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Photovoltaic system SPD is a surge protection device designed for photovoltaic power generation systems. It is used to prevent transient overvoltage caused by lightning strikes, grid failures or switch operations from damaging photovoltaic equipment. SPD is usually installed at key nodes such as the photovoltaic DC side, AC side and communication interface to effectively protect the safe operation of photovoltaic modules, inverters, junction boxes and control equipment. Photovoltaic systems are mostly located in high altitude, open or mountainous environments and are extremely susceptible to lightning strikes. SPD uses internal voltage-limiting components (such as varistors, gas discharge tubes, etc.) to instantly lead overvoltage to the ground wire, limit the port voltage rise rate, and thus reduce the risk of equipment breakdown.

The global Photovoltaic System SPD market size was estimated at USD 3265.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Photovoltaic System SPD market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
