### Report Overview

Photovoltaic welding tape refers to coating a uniform layer of tin-based soldering material on the surface of the copper tape, which can be divided into interconnection tape (connecting cells and soldering on grid lines with cells) and bus tape (connecting battery strings and Junction Box). The interconnecting ribbon is used for connecting solar cells in series, and is welded on the busbar wire of the cells, and has the function of collecting and transmitting the current of photovoltaic cells. The bus ribbon is a ribbon that connects the photovoltaic cell string and the junction box. It does not directly contact the cells and has the function of transmitting the current of the photovoltaic cell string.
