Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Phthalic Unsaturated Polyester Resin competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of phthalic unsaturated polyester resins will reach 3.26 million tons, with an average selling price of US\$1700 per ton. Phthalic unsaturated polyester resins are a type of thermosetting resin derived from linear unsaturated polyesters derived from the polycondensation of phthalic acid or its anhydride as the primary acid component with diols. These resins are diluted with unsaturated monomers such as styrene and cross-linked to initiate curing. These resins are mature and low-cost, exhibiting excellent glass fiber wettability, processability, comprehensive mechanical properties, and water resistance. Consequently, they are widely used in fiberglass reinforced plastics (FRP) parts, molded parts, pipes, gelcoats, building materials, and general molded parts. Their primary drawback is that they lack the weathering and heat resistance of isophthalic or high-end phthalic acid/bisphenol resins. However, their cost-effectiveness makes them a preferred material for general-purpose composite materials and gelcoats.

The global Phthalic Unsaturated Polyester Resin market size was estimated at USD 5540.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
