Abstracts

Physical property prediction software is to drastically improve the accuracy and reliability of physical property predictions. It uses novel scientific approach selects and qualifies all available data and applies state-of-the-art models such as quantum chemistry and molecular simulation in a fully automated, intelligent and transparent way. Also, you get transparency on what data has been most critical in making a prediction and guidance on experiments that can reduce overall uncertainty most. One of the possible drivers for the physical property prediction software market is the growing demand for accurate and efficient prediction of molecular properties in various fields, such as drug discovery, chemical engineering, and materials science. Physical property prediction software can provide quick and reliable estimates for many important pure component physical properties, such as solubility, boiling point, melting point, density, viscosity, and vapor pressure. These properties can be used to evaluate the performance, safety, and environmental impact of chemical compounds and products. Another possible driver for the physical property prediction software market is the advancement of deep learning and artificial intelligence in the field of computational chemistry. Deep learning and artificial intelligence can enable the development of more accurate and robust models for predicting molecular properties based on various descriptors, such as molecular structure, functional groups, and electronic properties. These models can also capture the temperature-dependence and non-linearity of some properties, as well as the interactions between different molecules in mixtures.

The global Physical Property Prediction Software market size was estimated at USD 2658.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
