Report Overview

The dilution refrigerator is a high-end scientific research instrument that can provide an environment close to absolute zero. It is widely used in scientific research fields such as condensed matter physics, material science, particle physics and even astronomical detection. The dilution refrigerator was proposed in 1951 by H.London. The theory of refrigeration by superfluid ^4He dilution ^3He method. By 1965, P. Das et al. made a ^3He - ^4He dilution refrigerator based on this theory, which has reached a low temperature of 1.8mK. It can maintain the temperature in the milliK range for a long time, has a large cooling capacity, and has become the most important means and equipment to obtain the milliK temperature.
