Adding PI produces a PTFE compound that is lower in friction than all of those previously described. It is non-abrasive, making it a good choice for applications involving softer mating surfaces like steel, aluminium, or other plastics. Polyimide filled PTFE therefore suits dry running and stop-start applications particularly well. However, polyimide is the priciest of the PTFE fillers. At present, the PI Filled PTFE market is very concentrated, with the top five companies occupying 91.3% of the market share.

The global PI Filled PTFE market size was estimated at USD 85.1 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
