Abstracts

Pick-to-light Systems are highly efficient visual aids widely used in warehousing, logistics, and production lines to improve picking efficiency and accuracy. By installing indicator lights of different colors at various picking points, the system can guide operators in real time which item to pick, reducing error rates and speeding up the entire picking process. These systems are typically equipped with wireless communication technology, enabling seamless integration with warehouse management systems (WMS) to ensure real-time information updates and transmission. Market demand primarily comes from e-commerce, express logistics, and automated warehousing industries, with e-commerce logistics accounting for over 50% of the demand. With the development of warehouse automation and intelligent logistics, future picking indicator systems will evolve towards greater intelligence, modularity, and energy efficiency. The Pick-to-light Systems market is experiencing rapid growth. With the increasing demands of e-commerce and global logistics, warehouse automation and lean management concepts are being widely adopted. As a key technology in warehousing and logistics, picking indicator systems significantly improve picking efficiency and accuracy, reduce human error, thereby lowering costs, increasing operational speed, and optimizing warehouse space utilization. Especially in the rapidly growing e-commerce and retail industries, the importance of picking indicator systems is increasing as consumers demand faster and more accurate delivery. From a market competition perspective, leading global automation solution providers are actively entering this market and continuously launching products with more intelligent, modular, and energy-efficient features. Furthermore, with continuous technological advancements, picking indicator systems have evolved from traditional simple light indicators to high-end solutions integrating wireless communication, AI intelligent analysis, and big data optimization. In the future, with the widespread adoption of smart warehousing, IoT technology, and 5G networks, picking indicator systems will play an increasingly important role in logistics

automation and supply chain management. Therefore, the market prospects are broad, especially against the backdrop of increasing demand for cross-border e-commerce and fast delivery, and this market is expected to continue its strong growth momentum.

The global Pick-to-light Systems market size was estimated at USD 266.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
