Abstracts

Pickling corrosion inhibitors are specialized chemical formulations designed to protect metal surfaces from acid-induced degradation during industrial cleaning processes, particularly acid pickling where strong acids like hydrochloric or sulfuric acid are used to remove scale, rust, and impurities from metals such as steel, copper, and aluminum. These inhibitors function by forming a protective film on the metal surface that minimizes acid attack while allowing the removal of oxides, thereby reducing metal loss, hydrogen embrittlement, and acid consumption. The market for these products is driven by demand from industries such as metal fabrication, automotive, aerospace, and construction, where surface preparation and corrosion control are critical for product quality and longevity. Growth is influenced by industrialization, infrastructure development, and stringent environmental regulations promoting efficient and sustainable metal treatment processes. Key market players focus on developing eco-friendly, high-performance inhibitors to meet evolving industry standards and reduce environmental impact. Regional dynamics show strong demand in Asia-Pacific due to expanding manufacturing sectors, while North America and Europe emphasize regulatory compliance and advanced inhibitor technologies. Challenges include volatility in raw material prices and the need for continuous innovation to address diverse metal-acid systems.

The global Pickling Corrosion Inhibitor market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
