Abstracts

A pickup on-board charger (OBC) is an essential power electronics component integrated into electric and hybrid pickup trucks that converts alternating current (AC) from external power sources, such as home or public charging stations, into direct current (DC) to recharge the vehicle's high-voltage battery pack efficiently and safely. Designed to handle the demanding energy requirements of larger battery systems in pickups, OBCs incorporate advanced thermal management, power factor correction, and communication protocols to optimize charging speed, ensure compatibility with varying grid standards, and enable smart charging features. Their performance directly influences charging time, energy efficiency, and overall usability of electric pickup trucks, making them a critical subsystem in the electrification of the light-duty commercial and utility vehicle segment. The global market for pickup on-board chargers is expanding rapidly, driven by the accelerating adoption of electric pickup trucks and supportive government policies promoting zero-emission vehicles. Key markets include North America, where models like the Ford F-150 Lightning and Rivian R1T have gained significant traction, as well as growing interest in Europe and Asia-Pacific regions. Technological advancements are focusing on higher power ratings (e.g., 11 kW to 22 kW) to reduce charging times, bidirectional charging capabilities for vehicle-to-grid (V2G) applications, and integration with renewable energy systems. Major players such as Tesla, BorgWarner, Delta Electronics, and Infineon are competing through innovations in efficiency, size reduction, and cost-effectiveness. However, challenges like supply chain constraints for semiconductors, thermal management in high-power applications, and pricing pressures remain pertinent. The market is also influenced by evolving charging infrastructure standards and consumer demand for faster, more versatile charging solutions. With electric pickups representing a high-growth segment in the automotive electrification trend, the on-board charger market is poised for sustained expansion, supported by investments in R&D and strategic collaborations.

among automakers, charger manufacturers, and energy providers.

The global Pickup On Board Charger market size was estimated at USD 3280.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.50% during the forecast period.
