Abstracts

The pickup wheel speed sensor is an essential component within the anti-lock braking system (ABS) and traction control systems of pickup trucks, responsible for monitoring the rotational speed of each wheel and transmitting real-time data to the vehicle's electronic control unit (ECU); this information enables critical safety functions such as preventing wheel lock-up during braking, optimizing traction on varying surfaces, and supporting advanced features like electronic stability control and tire pressure monitoring systems. These sensors are typically either passive (inductive) or active (Hall-effect or magneto-resistive) in design, with the latter offering greater accuracy and reliability, especially at lower speeds, and are often integrated into the wheel hub assembly or mounted near the wheel bearing.

The global Pickup Wheel Speed Sensor market size was estimated at USD 620.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
