Report Overview

PID Controller is a control loop feedback mechanism which calculates an error value as the difference between a setpoint and a measured process variable. PID Controller stands for stands for proportional–integral–derivative controller. PID controllers are majorly used for pressure controlling, temperature controlling, flow controlling and motion controlling.

Continuous innovations in technology has led to the introduction of smart PID controllers and hybrid PID controllers. Both smart PID controllers and hybrid PID controllers are more efficient and economical in comparison to conventional PID controllers. An increasing adoption of hybrid PID controllers is witnessed in temperature controlling functions. PID controllers have their major application in oil and gas, and food and beverage industry.
