Abstracts

The piezoelectric aperture is a special optical element that uses the piezoelectric effect to control the on and off of the light beam or adjust the parameters of the light beam. The piezoelectric effect means that when the internal structure of a piezoelectric material changes under the action of mechanical stress, its positive and negative charges accumulate at both ends of the material, thereby generating an amount of charge proportional to the applied mechanical stress, thereby measuring the stress.

The global Piezoelectric Aperture market size was estimated at USD 325.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
