Report Overview

The piezo-response of polymers is not as high as the response for ceramics; however, polymers hold properties that ceramics do not. Over the last few decades, non-toxic, piezoelectric polymers have been studied and applied due to their flexibility and smaller acoustical impedance. Other properties that make these materials significant include their biocompatibility, biodegradability, low cost, and low power consumption compared to other piezo-materials (ceramics, etc.). Piezoelectric polymers and non-toxic polymer composites can be used given their different physical properties.

The global Piezoelectric Polymer Materials market size was estimated at USD 119 million in 2023 and is projected to reach USD 286.97 million by 2030, exhibiting a CAGR of 13.40% during the forecast period.

North America Piezoelectric Polymer Materials market size was USD 31.01 million in 2023, at a CAGR of 11.49% during the forecast period of 2024 through 2030.
