Report Overview

Pigment Yellow 184 has a strong, bright yellow with a slight greenish color. When combined with organic pigments, it can produce very bright luster, with high color tone and strong hiding power. Molybdenum bismuth yellow coatings can be used for high-demand products such as automotive products, powder coatings and coil coatings, requiring relatively high dispersion performance and color strength. Molybdenum Bismuth Yellow has excellent dispersing properties, whether it is used in water-based coatings, powder coatings, oil-based coatings or inks, it can be dispersed well. Because of its excellent coloring properties, the price is relatively high, so it is generally used in the field of high-end coatings that require good weather resistance. Bismuth molybdate has excellent solvent resistance, acid and alkali resistance, and low light loss after exposure. It is an inorganic composite pigment with excellent performance and high weather resistance. It has excellent environmental performance, does not contain lead, and is widely used. It is used to replace toxic inorganic pigments such as cadmium yellow and chrome yellow, and is used in occasions requiring lead-free products. Molybdenum bismuth yellow and bismuth vanadate belong to the same class of chemical pigments.
