### Report Overview

A pile driving equipment is a mechanical device utilized in driving piles or poles into the soil to provide foundation support for buildings and other structures. Before starting the construction of a building, the load bearing capacity of the soil is analyzed at the site. It is essential to construct deep foundations when the soil is not stable to sustain heavy loads. Pile foundation provides reinforcement to a high-rise building against seismic activity and wind forces. The pile foundations act as a platform to provide a stronger base.
