Report Overview

Pipe coating machine are mainly divided into internal and external pipe coating equipment. It is one of the most basic methods of pipeline anti-corrosion, which can evenly and compactly coat pipeline anti-corrosion coating on the surface of the metal pipeline after derusting and insulate it from all kinds of corrosive medium. There are many kinds of anticorrosive coatings, and their properties and uses are different. The coating technology is to form a continuous covering layer of insulating material on the metal surface, insulation between the metal and the electrolyte in direct contact (to prevent the electrolyte from coming into direct contact with the metal) means setting a high resistance that prevents the electrochemical reaction from taking place.
