Abstracts

A Pipe In Pipe Bonded System (PIP) is an advanced thermal insulation solution used primarily in subsea pipelines for oil and gas transportation, consisting of an inner pipe that carries the product and an outer pipe that provides structural support, with the annular space between them filled with specialized insulation material?often polyurethane foam or aerogel?bonded to both pipes to minimize heat transfer and maintain the temperature of the transported fluids over long distances, thereby preventing issues like hydrate formation or wax deposition while also offering mechanical protection and resistance to external hydrostatic pressure.
