Abstracts

The pipeline automatic welding machine is an automated equipment specially used for long-distance pipeline welding operations. It is mainly used to achieve efficient, continuous and high-quality welding of pipeline ports. It automatically completes the arc starting, welding, wire feeding and shielding gas control of the weld through the coordinated work of the track system, welding host, controller, wire feeding system and welding power supply, which greatly improves the construction efficiency and welding consistency, and reduces the dependence on the technical level of manual welders. It is especially suitable for complex outdoor environments and large-diameter pipeline projects. In recent years, with the development of intelligent manufacturing technology, modern automatic welding machines have also integrated functions such as weld tracking, intelligent adjustment of welding parameters, and real-time monitoring and recording of welding quality, which have promoted pipeline welding into a new era of digitalization and intelligence.

The global Pipeline Automatic Welding Machine market size was estimated at USD 1672.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
