The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Pipeline Circulation Pump competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Pipeline circulation pumps are power devices used to transport liquids and maintain circulation flow within pipelines in heating, ventilation, and air conditioning systems, hot water circulation systems, cooling circuits, and industrial circulation systems. Global shipments in 2024 were approximately 4,200,000 units, with an average unit price of approximately US\$120. A typical single-line annual production capacity is approximately 200,000 units. The upstream industry mainly consists of motor and rotor manufacturing, pump body casting and precision machining, mechanical seals and bearings, coatings and anti-corrosion materials, and electronic controllers and frequency converters. The downstream industry primarily serves HVAC engineering contractors, residential and commercial building contractors, industrial equipment manufacturers, and equipment maintenance service providers. The industry's average gross profit margin is approximately 2%. The product cost structure is roughly as follows: raw materials and castings account for about 55%, motors and drive components account for about 20%, processing, assembly and labor account for about 15%, testing and quality inspection account for about 5%, and sales and logistics account for about 5%. According to parameters, it can be divided into categories such as low flow and low head, medium flow and medium head, and high flow and high head; according to power, such as low power, medium power and high power; according to control method, such as constant speed type and variable frequency speed control type; according to structure and installation form, such as pipeline direct connection type, flange connection type and vertical and horizontal type; according to material, such as cast iron type and stainless steel type; and according to application scenario, such as

civil hot water circulation, commercial central air conditioning circulation and industrial cooling circulation, etc.
