Report Overview

Pyro infrared sensing signal processing chips, commonly known as PIR signal processing chips, are used to process signals detected by pyro infrared sensors (PIR sensors). PIR sensors sense movement in the environment by detecting changes in infrared radiation from the bodies of people or animals. PIR signal processing chips amplify, filter and convert the analog signals of the sensor into usable digital signals or switch signals, which in turn drive related circuits and trigger corresponding actions, such as turning on lights, alarms or activating other devices.
