## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Piroctone Olamine for Cosmetics competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Piroctone Olamine is a synthetic ingredient that is used mainly as a preservative in personal care and cosmetic products. Piroctone ethanolamine salt makes the only anti-dandruff and anti-itch agent that can be used in leave-on hair products so far. Piroctone ethanolamine salt has a broad-spectrum killing effect on fungi and molds, and has good therapeutic effect on ringworm of feet and hands. It can be used as a preservative in cosmetics and a fungicide in soap, and has thickening properties. Therefore, Piroctone ethanolamine salt is a multifunctional anti-dandruff and anti-itch antiseptic, which is widely used in shampoo, bath, cosmetics and detergents. Compared with ketoconazole, piroctone olamine salt is less irritating and suitable for long-term use. Both the EU and China allow their use in cosmetics, usually with a concentration limit of 1.0%. The anti-dandruff shampoo market continues to grow, especially in the Asia-Pacific region (such as China and India), where it has a high penetration rate. As a relatively mild anti-dandruff ingredient, piroctone olamine continues to be used more frequently in mid- to high-end shampoo products.

The global Piroctone Olamine for Cosmetics market size was estimated at USD 140.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
