Abstracts

Piston-engine Aircraft Gasoline is a special high-octane fuel mainly used in piston engine aircraft. These engines are typically found in light aircraft, recreational aviation, and some small commercial planes. Aviation gasoline primarily consists of lead-based additives, although there has been increasing effort to reduce or eliminate the use of lead additives. Currently, some markets still use leaded aviation gasoline. The product range typically includes 100LL (low-lead type) and 100/130 (high-lead type), which are widely used in various aviation applications. The demand for aviation gasoline is influenced by trends in the aviation market, regulatory policies, and the availability of alternative fuels.

The global Piston Engine Aircraft Gasoline Avgas market size was estimated at USD 2494.51 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
