Abstracts

A planetary floor grinder is a specialized machine used in surface preparation and finishing processes, particularly for grinding, polishing, and leveling concrete, stone, and terrazzo floors. The term "planetary" refers to the grinder's unique design, which features a large central drive wheel with several smaller satellite grinding discs orbiting around it, much like planets around the sun. This configuration allows for more efficient and uniform grinding by distributing pressure evenly across the surface. Planetary floor grinders are widely used in construction, renovation, and industrial settings for creating smooth, polished finishes or preparing floors for coatings, adhesives, or overlays. Their versatility and ability to handle large areas make them a preferred choice for professional contractors.

The global Planetary Floor Grinder market size was estimated at USD 817.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
