### Report Overview

Planetary gear reducers are compact components that strive to maximize the transmission of torque in various applications. The mechanisms ensure the transmission of high torque levels while simultaneously decreasing the required number of motor revolutions for a set level of power. The planets, equally spaced around the central axis of rotation, mesh with the sun as well as the fixed ring gear, so they orbit as they roll. All the planets are mounted to a single rotating member, called a cage, arm or carrier. As the planet carrier turns, it delivers low-speed, high-torque output.
