## Abstracts

Plano-Concave Square Cylindrical Lens is an optical element, which is a lens with a plane and a concave cylinder. The concave cylinder has a curvature in the vertical direction, while it remains flat in the horizontal direction. The overall shape is square or rectangular, and it has a focusing or diverging effect on the incident light in a single direction (i.e., the cylinder direction). The main function of the plano-concave square cylindrical lens is to focus parallel or divergent light beams onto a line, or change the aspect ratio of the image. It has a wide range of applications in linear detector illumination, barcode scanning, holographic illumination, optical information processing and other fields.

The global Plano-Concave Square Cylindrical Lens market size was estimated at USD 132.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
