Abstracts

A plant activating agent is a specialized biostimulant product designed to enhance plant physiological processes and natural defense mechanisms, typically through the application of specific compounds such as seaweed extracts, humic acids, amino acids, beneficial microorganisms, or plant hormones. These agents function by stimulating seed germination, improving nutrient uptake, increasing stress tolerance to environmental factors like drought or disease, and promoting overall plant vigor and crop yield without acting as conventional fertilizers or pesticides. Their application spans agricultural crops, horticulture, turf management, and controlled-environment farming, positioning them as integral components in sustainable and precision agriculture practices aimed at optimizing plant performance and resource efficiency.

The global Plant Activating Agent market size was estimated at USD 750.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
