Abstracts

Plant-based bioherbicides refer to natural organic compounds extracted from plants that have the ability to kill or inhibit weed growth. The main components include plant extracts, plant essential oils, plant alkaloids, such as matrine, berberine, tea tree oil, etc. These components achieve weed control effects by interfering with the physiological processes of weeds, such as photosynthesis and cell division. Compared with chemical herbicides, plant-based bioherbicides have the characteristics of natural, environmentally friendly, low toxicity, and high efficiency, with less impact on the environment and human health, which meets the needs of green agriculture and sustainable development.

The global Plant-Based Bioherbicides market size was estimated at USD 1150.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
