Abstracts

Plant-based cleaning products refer to products whose main formulation systems consist of plant-derived surfactants (such as cocamidopropyl betaine and decyl glucoside), natural enzymes, organic acids, and plant extracts. These products serve as alternatives to petrochemical-based or chemically irritating household and industrial cleaners, covering various niche applications including kitchen cleaning, laundry, hard surface cleaning, and extended personal care cleaning. These products emphasize non-toxicity, biodegradability, low allergenicity, and environmental friendliness, while also possessing strong detergency, emulsification, dispersion, and deodorization capabilities. They are widely used in scenarios with high environmental and safety requirements, such as household chemical brands, hotel logistics, food processing, schools, and public facilities. With rising awareness of green and sustainable consumption, regulatory restrictions on traditional surfactants (such as SLS/SLES) and VOC emissions, and increased investment by multinational chemical companies in plant-based formulation R&D, these products are rapidly penetrating the mainstream market. In the future, as the cost of plant-based raw materials decreases and the supply chain becomes more streamlined, their market share in cleaning products will further expand.

The global Plant-based Cleaning Products market size was estimated at USD 1537.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.40% during the forecast period.
