Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Plant-based Empty Capsules competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Plant-based empty capsules are hollow capsules primarily made from plant-derived materials, commonly hydroxypropyl methylcellulose (HPMC) and other edible plant polysaccharides. Unlike traditional gelatin capsules, plant-based empty capsules contain no animal-derived ingredients, making them suitable for vegetarians and individuals with allergies to animal proteins. They offer excellent chemical stability and biocompatibility, providing a safe delivery vehicle for pharmaceuticals, dietary supplements, probiotics, enzymes, and other functional ingredients. Due to their natural and controllable composition, these capsules are widely used in pharmaceutical, nutraceutical, and functional food applications, particularly for oral dosage forms that require specific release sites and dissolution profiles. In 2024, the global sales volume of enteric-coated hydroxypropyl methylcellulose (HPMC) empty capsules reached 173.1 billion capsules, with an average price of 31 USD per 10,000 capsules.

The global Plant-based Empty Capsules market size was estimated at USD 536.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
