Abstracts

Plant based foamed sheets refer to biodegradable and compostable foam materials derived from renewable resources such as starches (e.g., corn, cassava), polylactic acid (PLA), or other bio-polymers, engineered to provide cushioning, insulation, or structural support while offering a sustainable alternative to petroleum-based foams like expanded polystyrene (EPS) or polyethylene (PE). These sheets are characterized by their lightweight, shock-absorbent, and thermal-resistant properties, and are increasingly designed to meet specific functional requirements such as moisture resistance, durability, and compatibility with existing manufacturing processes, making them suitable for applications in packaging, food service, construction, and consumer goods where environmental impact and end-of-life disposal are key considerations.
