Abstracts

Plant-based meat, also known as meat alternatives or vegan meat, refers to food products that mimic the taste, texture, and appearance of traditional animal-based meats but are made entirely from plant-based ingredients. These meat substitutes are typically created using ingredients such as soy protein, wheat gluten, peas, or other sources of vegetable protein. Plant-based meat products are designed to provide a similar sensory experience and nutritional profile to animal-based meats but are produced without the use of any animal ingredients. According to data from the Food and Agriculture Organization of the United Nations (FAO), the global aquatic product farming volume has shown an increasing trend from 1959 to 2021. According to preliminary statistics, the global aquatic product farming volume in 2021 was about 128 million tons. The State of World Fisheries and Aquaculture 2022 shows that total global aquaculture initial sales in 2020 was approximately US\$265 billion, with farm sales estimated to total US\$281.5 billion. Of the total aquaculture production, 87.5 million tons were produced of aquatic animals, mainly for human consumption; 35.1 million tons of algae, including food and non-food uses; 700 tons of shellfish and decorative pearls. Asian countries account for 70% of the global aquatic animal production in fisheries and aquaculture, followed by the Americas, Europe, Africa and Oceania.

The global Plant-based and Cultured Meat market size was estimated at USD 261.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 23.00% during the forecast period.
