## Abstracts

Vegan leather is often made from polyurethane, a polymer that can be made to order for any designer's whim. It can also be made from innovative and sustainable materials such as pineapple leaves, cork, apple peels, other fruit waste, and recycled plastic and used to create products that put animal skins to shame. The negative environmental impact of animal agriculture and leather production has led to a growing demand for eco-friendly alternatives. Plant-based vegan leather offers a more sustainable option.

The global Plant Based Vegan Leather market size was estimated at USD 70.7 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
