Abstracts

Plant-based Meat made from plants such as soy. It is especially designed and created to look like, taste like, and cook like conventional meat. Artificial meat can be in the form of a burger patty, nuggets, or even crumbles and sausages and as it grows more popular, these veggie-based alternatives are shaking up the meat industry and everything we thought we knew about veggie burgers. In recent years, the price of plant-based meat has continued to face downward pressure, and the product price is still higher than that of real meat. Thanks to the continuous expansion of the industry scale, the prices of products in the industry have continued to decline, and some enterprises have to operate at a loss in order to maintain their market positions. Entering 2022, affected by factors such as rising raw material prices and inflation, industry prices will begin to rise. Product prices are expected to remain relatively stable over the next few years.

The global Plant-based Vegan Meat market size was estimated at USD 1934.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.90% during the forecast period.
