## Abstracts

The development of plant growth nutrient solutions is mainly affected by the following driving factors:

**Agricultural modernization:** With the acceleration of agricultural modernization, the application of plant growth nutrient solutions is becoming more and more widespread. Agricultural modernization has led to the gradual development of agricultural production methods in the direction of mechanization and intelligence. Plant growth nutrient solutions can improve the yield and quality of plants through precise fertilization, intelligent management, etc., meeting the needs of modern agricultural development.

**Continuous innovation in science and technology:** Continuous innovation in science and technology provides important support for the development of plant growth nutrient solutions. New plant growth nutrient solution formulas and production technologies are constantly emerging, which can better meet the needs of different plants and improve plant disease resistance, yield and quality.

**Shortage of water resources:** Water resources are an important resource for agricultural production. However, due to climate change, urban expansion and other reasons, water shortages have become one of the important factors restricting agricultural production. Plant growth nutrient solution can improve the utilization efficiency of water resources and alleviate the problem of water shortage through precise irrigation, water-saving irrigation and other methods.

**Market demand:** As people become more aware of healthy eating and environmental protection, green and organic food is becoming more and more popular among consumers. Plant growth nutrient solution can produce high-quality organic food to meet market demand and increase the added value of agricultural production.

**Policy support:** The government's support for agricultural technological innovation and green agriculture development also provides a good environment and opportunities for the development of plant growth nutrient solutions. The government can encourage the production and application of plant growth nutrient solutions through policy support and tax incentives to promote the sustainable development of agricultural

production.
