Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Plant Lodging Tester competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Plant Lodging Tester is a specialized instrument used to detect and evaluate the lodging resistance of crop stems. It typically measures the stem's strength, flexibility, or bending strength to determine its vulnerability to natural factors such as wind and rain. This device is widely used in agricultural research, variety selection, and field management, helping agricultural technicians select lodging-resistant crop varieties and improve crop yields and harvest efficiency. Sales in 2024 were expected to reach 220,000 units, with an average price of US\$750 per unit. The single-line production capacity is 30,000 units, with a gross profit margin of 60%. Downstream consumption averages approximately five units per unit. Within the Plant Lodging Tester industry chain, both upstream and downstream stakeholders must prioritize coordination and quality control. Upstream suppliers of sensors, structural components, and other components must ensure accurate and reliable parts to ensure stable and consistent measurement. They must also prioritize technological advancements to meet the demands of instrument intelligence. Downstream, agricultural research institutions, seed companies, and farm users must understand instrument functionality and operate them in a standardized manner to avoid data distortion caused by misuse. Furthermore, post-data collection, analysis and feedback should be prioritized to promote variety improvement and optimize cultivation techniques, truly maximizing the instrument's application value.

The global Plant Lodging Tester market size was estimated at USD 165.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
