Abstracts

Plant sourced emulsifiers are food additives derived from natural botanical sources, such as lecithin from soybeans or sunflowers, pectin from fruits, and gums from seeds or seaweed, which function to stabilize mixtures of ingredients that would otherwise separate, such as oil and water, by reducing surface tension and forming uniform, stable emulsions; these emulsifiers are increasingly favored in the food, beverage, cosmetic, and pharmaceutical industries due to growing consumer demand for clean-label, sustainable, and allergen-free products, as they offer a natural alternative to synthetic or animal-derived emulsifiers like polysorbates or mono- and diglycerides.

The global Plant Sourced Emulsifier market size was estimated at USD 365.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.75% during the forecast period.
