## Abstracts

Plant Tissue and Leaf Test Service is a professional testing and analysis service based on plant leaf and tissue samples, primarily used to assess the nutritional status, health, and potential defects of crops or plants. By accurately measuring macronutrients (such as nitrogen, phosphorus, potassium, calcium, magnesium, and sulfur) and trace elements (such as iron, zinc, manganese, copper, boron, and molybdenum) in leaves and other tissues, this service helps farmers, research institutions, and agricultural consultants determine whether plants are in optimal growing conditions. Compared to soil testing, plant tissue testing directly reflects a plant's actual nutrient uptake, making it more valuable in guiding precision agriculture and crop management.

The global Plant Tissue and Leaf Test Service market size was estimated at USD 1563.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
